

COUNT YOUR CARBON

It's time to Count Your Carbon

Every year in England, schools emit more than 10 million tonnes of carbon.

What if we could do something to change that?

Count Your Carbon is the nation's first free, full scope carbon emissions tool built for – and in collaboration with – nurseries, schools and colleges.

Whether you're at the very start of your sustainability journey, or you're a passionate environmentalist looking to effect change, join us on our mission to reduce carbon emissions in educational settings by 50% by 2030.

What is Count Your Carbon?

Count Your Carbon is a free and easy to use digital tool which allows your school, nursery or college to;

- ✓ Calculate the carbon footprint for your educational setting
- ✓ Understand the areas of consumption with the greatest carbon burden
- ✓ Opt for averages where you don't have access to information
- ✓ Generate a tailored report on how to reduce carbon emissions in your setting
- ✓ Compare your carbon footprint over time

We know that the challenge we face is huge. But with more than 32,000 educational settings in the UK, the possibility for change on a massive scale is possible.

How does it work?

Count Your Carbon is based on the world's most widely used greenhouse gas accounting standards: the GHG Protocol, and has been tailored to educational settings.

The tool was built by Eco-Schools England in partnership with Let's Go Zero and carbon experts Arete Zero Carbon, and is made possible thanks to players of People's Postcode Lottery. Development was informed by months of in-depth research with those working in educational settings (including teachers, catering staff, bursars and caretakers) and within local authorities.
